

PRESS RELEASE

WORLD'S MOST ADVANCED MONITORING SOLUTION FOR NOISE, VIBRATION, DUST AND WEATHER WITH LIVE WEB SERVER.

Magus Monitoring, a division of Magus Electronics, now in its 25th year has just announced the latest in its award winning range of innovative monitoring products.

The latest offering from the Sandbach based business, combines the Vibrosound range with the Remote Monitor to give an exclusive monitoring solution.

The system can include any or all of the following: Noise, Vibration, Dust and Weather (Wind, Precipitation, Temperature and Humidity). The data is accessible via the internet or dial up connection on a secure web server.

We have recently introduced a modem option which enables the user to download the data remotely, eliminating the need for site visits in order to retrieve the data; this option is available instead of the printer.

Shaw, entrepreneur and owner of Magus, commented "It's time to bring the monitoring industry into the 21st century to enable easy compliance with the legislative requirements. Gone are the days of having to drive to sites to check values and download data."

Magus has developed a reputation for problem solving for many large multinational companies and now applies the same methodology into its own products.
